Science Byways: A Series of Familiar Dissertations on Life in Other Worlds; Comets and the Sun; The North Pole; Rain; Danger from Lightning; Growth ... Mental Feats; Automata; &C (Classic Reprint)

Richard A. Proctor

As the title of my Borderland of Science was misunderstood by some, it may be well perhaps for me to explain in what sense I apply the term Science Byways to the essays of the present volume. In the study of science there are three chief departments: (1) original research, which may be compared to the pioneering of new roads ;(2) the thorough study of a branch of science, in all its details, with such observations, experiments, and calculations as may be necessary to give a complete mastery of it, such study being comparable to travel on the high road, and providing the only trustworthy approach to the lines on which new roads are to be pioneered; and thirdly, the study of scientific facts without the mastery of the methods or processes by which they have been ascertained, a form of study which may be compared to wandering on pleasant by-paths beside the regular roadway.
