Multiple Myeloma:

The second issue of *Emerging Cancer Therapeutics* focuses on multiple myelomas also known as plasma cell myeloma, Kahler's Disease and myelomatosis. It is estimated that over 20,000 new cases are diagnosed each year with over 10,000 people dying from these malignancies. Multiple myelomas are highly treatable but rarely curable. Thus it is crucial for the practitioner to be up-to-date on the latest insights regarding their management.

Management options and outcomes for individuals with multiple myelomas improved dramatically with the introduction of chemotherapy. Even further improvements in prognosis have occurred because of the introduction of newer therapies such as pulse corticosteroids, thalidomide, bortezomib, and autologous and allogeneic stem cell transplantation. With the increased number of therapeutic options to choose from, the clinician is better placed to offer effective therapy but at the same time is challenged to keep abreast of the rapidly changing treatment landscape and the newly emerging data that is shaping the treatment options today and in the future. *Multiple Myeloma* provides a comprehensive and in-depth review of this group of malignancies. This volume reviews the current literature, provides critical evaluations of the data and offers evidence-based recommendations.

About the Series:

Emerging Cancer Therapeutics is an invited review publication providing a through analysis of key clinical research related to cancer therapeutics, including a discussion and assessment of current evidence, current clinical best practice, and likely near future developments. There is an emphasis throughout on multidisciplinary approaches to the specialty, as well as on quality and outcomes analysis. Published three times a year *Emerging Cancer Therapeutics* provides authoritative, thorough assessments of advances in therapeutics in all major areas of oncology, both solid and hematologic malignancies, with a focus on advances in medical and biological therapies with emerging clinical impact and encompassing new technologies with implications for management such as molecular imaging.

Features of *Emerging Cancer Therapeutics* include:

- Editorial board of nationally recognized experts across the spectrum of Cancer Therapeutics
- In-depth, up-to-date expert reviews and analysis of major new developments in all areas of Cancer Therapeutics
- Issues edited by an authority in specific subject area
- Focuses on major topics in Cancer Therapeutics with in-depth articles covering advances in clinical and translational research developments, as well as clinical applications and experience
- Emphasizes multidisciplinary approaches to research and practice
