G.F. Bonham-Carter

Geographic Information Systems for Geoscientists, Volume 13: Modelling with GIS (Computer Methods in the Geosciences) G.F. Bonham-Carter

This valuable reference book is unique in its coverage of examples from the geological sciences, many centred on applications to mineral exploration. The underlying principles of GIS are stressed and emphasis placed on the analysis and modelling of spatial data with applications to site selection and potential mapping. The book commences with a definition of GIS and describes a case study of mapping mineral potential. The ways in which spatial data are organized with models (raster, vector, relational) are discussed and data structures, such as quadtrees and topological structures are introduced. Data input including digitizing, geographic projections and conversions is covered together with output (visualization, representation of colour and spatial query). Spatial data transformations are dealt with thoroughly and attention is paid to map analysis and modelling as related to single maps, map pairs and multiple maps respectively. Methods of quantifying the associations between pairs of maps are emphasized. Finally, examples of landfill site selection and mineral potential mapping illustrate the application of map algebra for combining maps and tables with models, employing Boolean logic, index weighting, fuzzy logic and probability methods such as weights of evidence. There is an extensive glossary of terms, and references accompany each chapter. Contains 40 pages of colour illustrations.

From reader reviews:

Tiara Garcia:

Reading can called imagination hangout, why? Because if you are reading a book specifically book entitled Geographic Information Systems for Geoscientists, Volume 13: Modelling with GIS (Computer Methods in the Geosciences) your mind will drift away trough every dimension, wandering in every aspect that maybe unknown for but surely will become your mind friends. Imaging every single word written in a e-book then become one application form conclusion and explanation that maybe you never get ahead of. The Geographic Information Systems for Geoscientists, Volume 13: Modelling with GIS (Computer Methods in the Geosciences) giving you an additional experience more than blown away your mind but also giving you useful data for your better life in this era. So now let us demonstrate the relaxing pattern this is your body and mind is going to be pleased when you are finished examining it, like winning a casino game. Do you want to try this extraordinary investing spare time activity?

David Ashworth:

Your reading sixth sense will not betray you actually, why because this Geographic Information Systems for Geoscientists, Volume 13: Modelling with GIS (Computer Methods in the Geosciences) reserve written by well-known writer who knows well how to make book that could be understand by anyone who also read the book. Written in good manner for you, dripping every ideas and producing skill only for eliminate your own hunger then you still hesitation Geographic Information Systems for Geoscientists, Volume 13: Modelling with GIS (Computer Methods in the Geosciences) as good book not merely by the cover but also by content. This is one e-book that can break don't determine book by its include, so do you still needing one more sixth sense to pick this specific!? Oh come on your studying sixth sense already said so why you have to listening to a different sixth sense.

Rodney Richardson:

A lot of reserve has printed but it differs from the others. You can get it by world wide web on social media. You can choose the best book for you, science, comedian, novel, or whatever by simply searching from it. It is known as of book Geographic Information Systems for Geoscientists, Volume 13: Modelling with GIS (Computer Methods in the Geosciences). You can add your knowledge by it. Without leaving the printed book, it could add your knowledge and make a person happier to read. It is most crucial that, you must aware about e-book. It can bring you from one location to other place.

Cynthia Cisneros:

What is your hobby? Have you heard this question when you got learners? We believe that that problem was given by teacher to the students. Many kinds of hobby, All people has different hobby. Therefore you know that little person similar to reading or as looking at become their hobby. You need to know that reading is very important along with book as to be the point. Book is important thing to increase you knowledge,

except your own teacher or lecturer. You discover good news or update in relation to something by book. Amount types of books that can you take to be your object. One of them is actually Geographic Information Systems for Geoscientists, Volume 13: Modelling with GIS (Computer Methods in the Geosciences).
