Introduction to Global Optimization (Nonconvex Optimization and Its Applications) R. Horst, Panos M. Pardalos, Nguyen Van Thoai

Global optimization concerns the computation and characterization of global optima of nonlinear functions. Such problems are widespread in the mathematical modelling of real systems in a very wide range of applications and the last 30 years have seen the development of many new theoretical, algorithmic and computational contributions which have helped to solve globally multiextreme problems in important practical applications.

Most of the existing books on optimization focus on the problem of computing locally optimal solutions.

Introduction to Global Optimization, however, is a comprehensive textbook on constrained global optimization that covers the fundamentals of the subject, presenting much new material, including algorithms, applications and complexity results for quadratic programming, concave minimization, DC and Lipschitz problems, and nonlinear network flow. Each chapter contains illustrative examples and ends with carefully selected exercises, designed to help students grasp the material and enhance their knowledge of the methods involved.

Audience: Students of mathematical programming, and all scientists, from whatever discipline, who need global optimization methods in such diverse areas as economic modelling, fixed charges, finance, networks and transportation, databases, chip design, image processing, nuclear and mechanical design, chemical engineering design and control, molecular biology, and environmental engineering.

From reader reviews:

Charles Alexander:

Within other case, little folks like to read book Introduction to Global Optimization (Nonconvex Optimization and Its Applications). You can choose the best book if you'd prefer reading a book. Provided that we know about how is important any book Introduction to Global Optimization (Nonconvex Optimization and Its Applications). You can add understanding and of course you can around the world by way of a book. Absolutely right, simply because from book you can know everything! From your country until eventually foreign or abroad you will end up known. About simple factor until wonderful thing you are able to know that. In this era, we can easily open a book or even searching by internet gadget. It is called e-book. You may use it when you feel fed up to go to the library. Let's examine.

Jennifer Tomasini:

As people who live in the actual modest era should be revise about what going on or facts even knowledge to make these people keep up with the era that is certainly always change and progress. Some of you maybe will update themselves by examining books. It is a good choice to suit your needs but the problems coming to anyone is you don't know what kind you should start with. This Introduction to Global Optimization (Nonconvex Optimization and Its Applications) is our recommendation to make you keep up with the world. Why, because this book serves what you want and want in this era.

Helen Chandler:

The book Introduction to Global Optimization (Nonconvex Optimization and Its Applications) has a lot associated with on it. So when you make sure to read this book you can get a lot of profit. The book was written by the very famous author. Tom makes some research previous to write this book. That book very easy to read you can obtain the point easily after scanning this book.

Robert Knight:

Guide is one of source of know-how. We can add our know-how from it. Not only for students but also native or citizen have to have book to know the revise information of year for you to year. As we know those publications have many advantages. Beside we all add our knowledge, can also bring us to around the world. By book Introduction to Global Optimization (Nonconvex Optimization and Its Applications) we can have more advantage. Don't you to definitely be creative people? Being creative person must love to read a book. Merely choose the best book that ideal with your aim. Don't be doubt to change your life at this book Introduction to Global Optimization (Nonconvex Optimization and Its Applications). You can more pleasing than now.
