Classical Electrodynamics (Advanced Book Program) Julian Schwinger, Lester L. Deraad Jr., Kimball A. Milton, Wu-yang Tsai, Joyce Norton

Classical Electrodynamics captures Schwinger's inimitable lecturing style, in which everything flows inexorably from what has gone before. Novel elements of the approach include the immediate inference of Maxwell's equations from Coulomb's law and (Galilean) relativity, the use of action and stationary principles, the central role of Green's functions both in statics and dynamics, and, throughout, the integration of mathematics and physics. Thus, physical problems in electrostatics are used to develop the properties of Bessel functions and spherical harmonics. The latter portion of the book is devoted to radiation, with rather complete treatments of synchrotron radiation and diffraction, and the formulation of the mode decomposition for waveguides and scattering. Consequently, the book provides the student with a thorough grounding in electrodynamics in particular, and in classical field theory in general, subjects with enormous practical applications, and which are essential prerequisites for the study of quantum field theory. An essential resource for both physicists and their students, the book includes a "Reader's Guide," which describes the major themes in each chapter, suggests a possible path through the book, and identifies topics for inclusion in, and exclusion from, a given course, depending on the instructor's preference. Carefully constructed problems complement the material of the text, and introduce new topics. The book should be of great value to all physicists, from first-year graduate students to senior researchers, and to all those interested in electrodynamics, field theory, and mathematical physics. The text for the graduate classical electrodynamics course was left unfinished upon Julian Schwinger's death in 1994, but was completed by his coauthors, who have brilliantly recreated the excitement of Schwinger's novel approach.

From reader reviews:

Mildred Parker:

What do you consider book? It is just for students as they are still students or it for all people in the world, the particular best subject for that? Only you can be answered for that problem above. Every person has distinct personality and hobby for each other. Don't to be obligated someone or something that they don't would like do that. You must know how great in addition to important the book Classical Electrodynamics (Advanced Book Program). All type of book can you see on many options. You can look for the internet solutions or other social media.

Michelle Gilbert:

The book untitled Classical Electrodynamics (Advanced Book Program) contain a lot of information on this. The writer explains her idea with easy technique. The language is very clear and understandable all the people, so do not worry, you can easy to read this. The book was compiled by famous author. The author provides you in the new period of literary works. You can easily read this book because you can read on your smart phone, or device, so you can read the book within anywhere and anytime. In a situation you wish to purchase the e-book, you can available their official web-site in addition to order it. Have a nice read.

Susan Munoz:

In this particular era which is the greater particular person or who has ability to do something more are more important than other. Do you want to become considered one of it? It is just simple solution to have that. What you have to do is just spending your time very little but quite enough to have a look at some books. Among the books in the top checklist in your reading list is usually Classical Electrodynamics (Advanced Book Program). This book which can be qualified as The Hungry Hills can get you closer in turning into precious person. By looking upwards and review this reserve you can get many advantages.

Anthony Muller:

As a university student exactly feel bored to help reading. If their teacher expected them to go to the library or make summary for some book, they are complained. Just small students that has reading's soul or real their passion. They just do what the trainer want, like asked to go to the library. They go to right now there but nothing reading really. Any students feel that looking at is not important, boring as well as can't see colorful pics on there. Yeah, it is for being complicated. Book is very important to suit your needs. As we know that on this period of time, many ways to get whatever we would like. Likewise word says, many ways to reach Chinese's country. Therefore , this Classical Electrodynamics (Advanced Book Program) can make you truly feel more interested to read.
